

GLOBAL TASK FORCE ON  
**CHOLERA CONTROL**

Christophe Valingot, IFRC/CSP Cholera Advisor

*March 2023*

**Linking the GTFCC Roadmap, NCPs, and investments in WASH services at country level**

From the Global Roadmap to “operational planning” and actual implementation of cholera control activities in the field

How can WE (GTFCC, CSP and GTFCC WASH Working group) support interested Governments to control cholera in the long run, through the mobilisation of the WASH sector and improving the level of access to WASH services

**Initial hypothesis:** IF WASH conditions are “enough”, then cholera transmission will be significantly reduced or stopped.

But what is enough protective ? We need to agree on target levels of WASH services.

Why are people getting sick. What are risk factors / protective factors ?

Rôle of Research ?

What is the level of service that is needed to protect a household from cholera and other water borne diseases ?

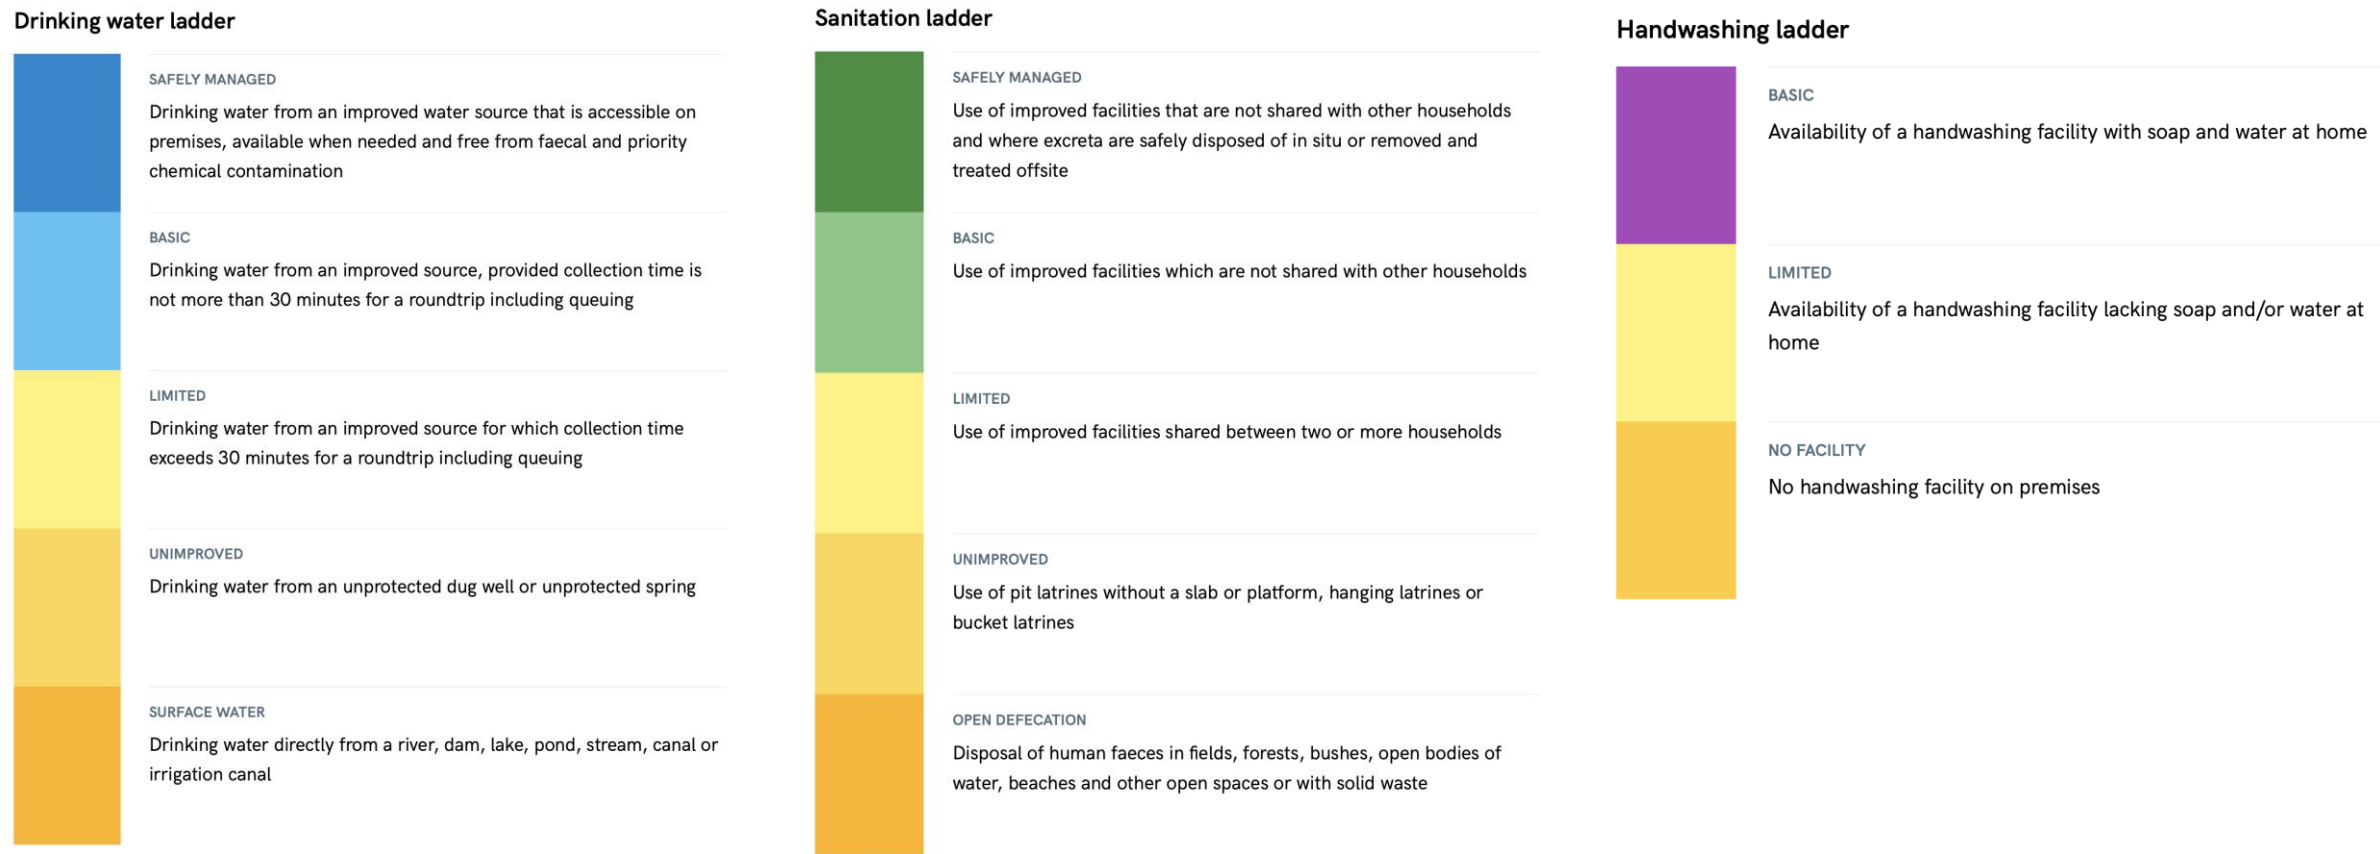

Do we have “herd” protection effect in a community when a certain pourcentage of population has access to safely managed services (70% for ex.) ?

*Preventing diarrhoea through better  
water, sanitation and hygiene.  
WHO, 2014*

How can we (GTFCC, CSP and GTFCC WASH Working group) support interested Governments to control cholera in the long run, through the mobilisation of the WASH sector and improving the level of access to WASH services ?

WHO/UNICEF - JMP ladders of levels of access to water, sanitation and hygiene service

How can we (GTFCC, CSP and GTFCC WASH Working group) support interested Governments to control cholera in the long run, through the mobilisation of the WASH sector and improving the level of access to WASH services ?

What do you think of the level “UNIMPROVED” or the lower levels of service?

Drinking water ladder

	<b>SAFELY MANAGED</b> Drinking water from an improved water source that is accessible on premises, available when needed and free from faecal and priority chemical contamination
	<b>BASIC</b> Drinking water from an improved source, provided collection time is not more than 30 minutes for a roundtrip including queuing
	<b>LIMITED</b> Drinking water from an improved source for which collection time exceeds 30 minutes for a roundtrip including queuing
	<b>UNIMPROVED</b> Drinking water from an unprotected dug well or unprotected spring
	<b>SURFACE WATER</b> Drinking water directly from a river, dam, lake, pond, stream, canal or irrigation canal

Sanitation ladder

	<b>SAFELY MANAGED</b> Use of improved facilities that are not shared with other households and where excreta are safely disposed of in situ or removed and treated offsite
	<b>BASIC</b> Use of improved facilities which are not shared with other households
	<b>LIMITED</b> Use of improved facilities shared between two or more households
	<b>UNIMPROVED</b> Use of pit latrines without a slab or platform, hanging latrines or bucket latrines
	<b>OPEN DEFECATION</b> Disposal of human faeces in fields, forests, bushes, open bodies of water, beaches and other open spaces or with solid waste

Handwashing ladder

	<b>BASIC</b> Availability of a handwashing facility with soap and water at home
	<b>LIMITED</b> Availability of a handwashing facility lacking soap and/or water at home
	<b>NO FACILITY</b> No handwashing facility on premises

How can we (GTFCC, CSP and GTFCC WASH Working group) support interested Governments to control cholera in the long run, through the mobilisation of the WASH sector and improving the level of access to WASH services ?

What do you think of the “LIMITED” level of service?

Drinking water ladder

	<b>SAFELY MANAGED</b> Drinking water from an improved water source that is accessible on premises, available when needed and free from faecal and priority chemical contamination
	<b>BASIC</b> Drinking water from an improved source, provided collection time is not more than 30 minutes for a roundtrip including queuing

How can we (GTFCC, CSP and GTFCC WASH Working group) support interested Governments to control cholera in the long run, through the mobilisation of the WASH sector and improving the level of access to WASH services

SDG 6 targets on access to safe water and sanitation is the “safely managed” level of service.

The indicators to measure success of SDG6 are :

% of population using safely managed drinking water services

% of population using (a) safely managed sanitation services and (b) a hand-washing facility with soap and water

Ok, so why don't we just aim at SDG targets at national level ?

SDGs targets are ambitious, but probably necessary – the “basic” level (access to improved source at max 30 minutes, and unshared toilets without proper sewer management) would probably be considered not enough to provide significant health benefits / diarrheal risk reduction (see WHO reference).

BUT – Cost of reaching SDG 6 for a whole country ? For multiple countries ?

Costing estimates (ex. DRC): **4 395 millions USD of annual investments** to reach SDG 6 in 2030 (8,1% of GDP)

For Cholera , maybe we can be less ambitious and focus not on the whole country, but first on cholera affected areas (cholera hotspots / Cholera PAMIs) > which represents only a fraction of all districts (and we can also go down to more finer geographical definition of cholera hotspots, to be more restrictive).

How can we (GTFCC, CSP and GTFCC WASH Working group) support interested Governments to control cholera in the long run, through the mobilisation of the WASH sector and improving the level of access to WASH services

Once targets on levels of services have been set (by the country) and priority areas have been identified, we need to make sure the cholera hotspots will be “prioritized” for WASH investments by the Government and all WASH partners, and that it is integrated into operational programming of the WASH sector.

### First step – Planning, budgeting

- Set the objectives = target level of service / WASH conditions that need to be in place to reduce cholera risk
- Set the geographical zones to be targeted (cholera hotspots / cholera PAMIs)
- Develop a **National Cholera Control Plan (NCP)**, which includes a WASH section
- Estimates the costs associated with the operationalisation of the plan – Develop a **WASH investment plan in cholera hotspots, ideally per hotspot**

> When we will reach this point, we will know what to do, where, and how much it will cost approximately

But we still have not defined (yet) HOW we are going to implement the plan, with which money, who is going to finance it, who is going to implement the works, who is going to monitor and provide feedback on progresses and to whom.

How can we (GTFCC, CSP and GTFCC WASH Working group) support interested Governments to control cholera in the long run, through the mobilisation of the WASH sector and improving the level of access to WASH services

## Second step - Operationalisation

We have to discuss collectively the different ways to reach there – knowing that the targets are ambitious, the number of hotspots is important, the number of projects that need to be developed and implemented are even bigger, the amount of money is considerable. And that there is already at national level a WASH investment programming led by the Ministry of Water/Sanitation and probably a WASH investment plan to reach the SDG 6 (or should exist).

## The Project Approach Vs. The System Approach ? Pros & Cons

### The Project Approach

Each WASH actor try to build one or several projects in one or several cholera hotspots

Each WASH actor try to find its own funding, is independent in terms of objectives, results or even levels of service to be reached and how to measure successes

### The System Approach

Support to National Gouvernements to plan, budget, mobilise funding partners, implement and monitor progresses in identified hotspots

How can we (GTFCC, CSP and GTFCC WASH Working group) support interested Governments to control cholera in the long run, through the mobilisation of the WASH sector and improving the level of access to WASH services

### Third step – Monitoring & Evaluation

How are we going to monitor progresses in WASH services in cholera hotspots, and how are we going to be able to determine if progresses in the WASH services are leading to improved health outcomes.

Work with researchers on how to demonstrate progresses over time and relative contribution to the reduction of risk (diarrheal disease / cholera) of several actions

Need to document, capitalize, and showcase success stories in order to be able to raise more interest and funding in the future.

How can we (GTFCC, CSP and GTFCC WASH Working group) support interested Governments to control cholera in the long run, through the mobilisation of the WASH sector and improving the level of access to WASH services

### WASH in NCP (proposition) workplan 2023

Work on WASH service level. Literature review. Research. Expert Debate > Guidance ?

Work on WASH assessments and costing estimates (different methodologies). Expert Debate > Guidance ?

Work on how to operationalise NCPs and WASH investments plans in cholera hotspots. Capitalisation. Case studies. Guidance ?

Work on monitoring progresses, and evaluation of contribution / attribution of WASH services improvement over diarrheal disease reduction / cholera risk reduction.

+ others, open to debate.
