

GTFCC INTERIM CHOLERA-FREE STATUS FRAMEWORK

K. Heitzinger (CDC)GTFCC subgroup lead03 May 2023

ENDING CHOLERA - GLOBAL ROADMAP TO 2030

Cholera-free status

Cholera eliminated as a threat to public health

Absence of community transmission of cholera documented for at least three consecutive years based on a well-functioning epidemiologic and laboratory surveillance system able to detect and confirm cases

Global Roadmap target

20 countries could eliminate the disease
as a threat to public health by 2030

GTFCC CHOLERA-FREE STATUS FRAMEWORK Purpose

Harmonized and transparent framework:

- For GTFCC Target Countries and Regions to document in a standardized manner the achievement and maintenance of elimination of cholera disease as a threat to public health
- For the GTFCC to independently assess, formally recognize, and monitor progress towards cholera elimination

GTFCC CHOLERA-FREE STATUS FRAMEWORK State of play

 Interim GTFCC Cholera-free status framework presented at the 2022 meeting of the Surveillance WG

Pre-publication steps as per GTFCC Steering Committee recommendations

3 Publish/launch

Refine with lessons learned

1 Pilot in-country

OBJECTIVES FOR THIS PRESENTATION

- ☐ Sensitize potential pilot countries
- Opportunity to be a pioneering country!
- Flexibility (framework not definitive at this stage)
- In case of negative outcome:
 - Identity of pilot country is confidential
 - Recommendations for improving surveillance and preparedness are provided
- Recap key requirements of piloting so that potential pilot countries can ((identify themselves))

KEY REQUIREMENTS & PROCEDURES

CHOLERA-FREE STATUS Key requirements

Recognition of cholera-free status

- ✓ Absence of community transmission
- ✓ Appropriate and wellperforming epidemiologic and laboratory
 surveillance

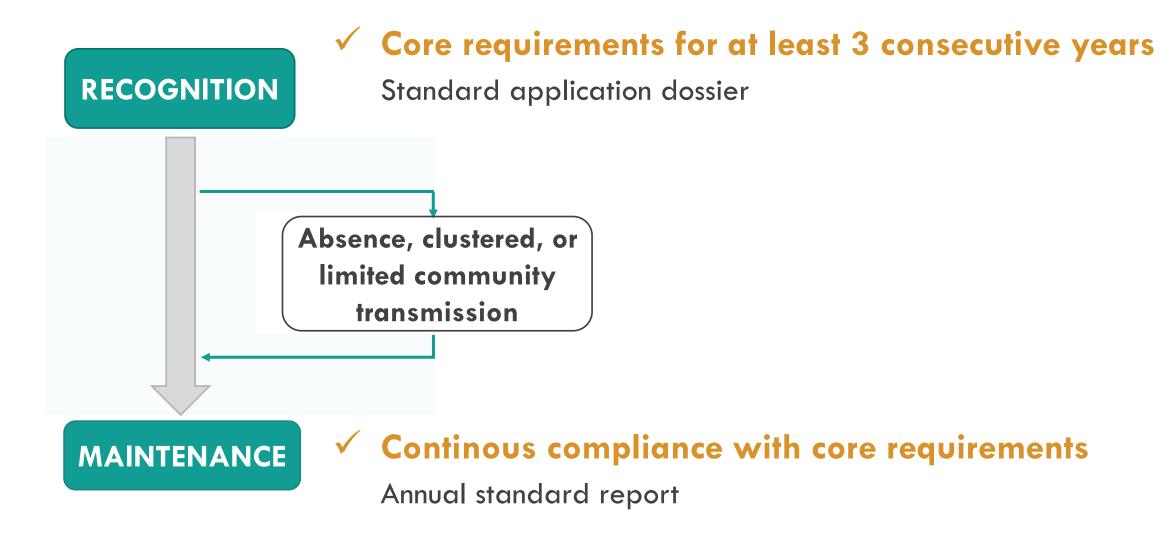

Maintenance of recognized cholera-free status

- ✓ Continued absence of sustained or widespread community transmission

 Tolerance for limited community transmission (<2 months and not spreading beyond one surveillance unit)
- Appropriate and well-performing epidemiologic and laboratory surveillance

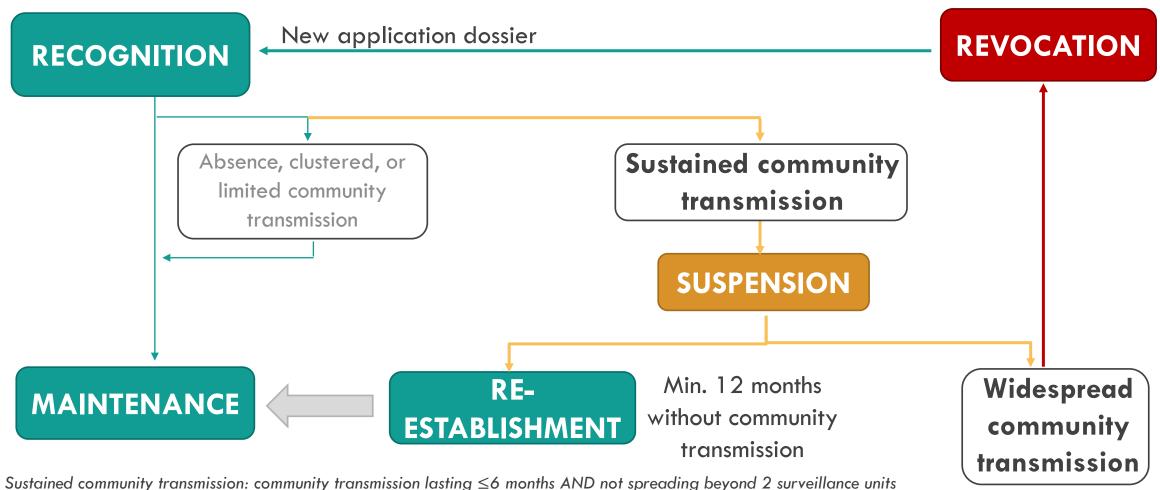

CHOLERA-FREE STATUS Recognition and maintenance

CHOLERA-FREE STATUS A bumpy road: suspension and revocation

Sustained community transmission: community transmission lasting ≤6 months AND not spreading beyond 2 surveillance units Widespread community transmission: community transmission lasting >6 months OR spreading to 3 or more surveillance units

CHOLERA-FREE STATUS Procedures

1. Dossiers
submitted by countries to
the GTFCC Secretariat

- Standard dossiers for:
- Initial recognition
- Annual maintenance
- Re-establishment after suspension

2. Review and evaluation by a GTFCC cholera-freestatus Independent Review Panel

- 3. Decision
 by the
 Independent
 Review Panel
- Positive/negative outcome (confidential)
- Recommendations to be addressed in the future

KEY MESSAGES

- Cholera-free status does not mean absence of any cholera cases (imported, cluster) provided transmission in the community is prevented
- A recognized status is subject to maintenance
- Countries must document compliance with applicable requirements
- GTFCC Independent Review Panel's assessment is independent, based on transparent criteria

POTENTIAL PILOT COUNTRIES

- GTFCC target country
- Application for the entire territory (no subnational status)
- Of note, 12 GTFCC target countries did not officially report cholera community transmission for ≥3 years

Those may be potential pilot countries provided:

- 1. Well-functioning epidemiologic and laboratory surveillance system able to detect and confirm cases over that period can be documented
- 2. Strong political will to engage in the process for recognition and maintenance

COUNTRIES POTENTIALLY MEETING THESE CRITERIA

- Learn more about the free-status framework and applicable requirements and process
- o https://youtu.be/7gvPel1XJqA
- Liaise with GTFCC Secretariat (informal)
- In person
- O GTFCCsecretariat@who.int
- No public annoncement required
- Confidentiality can be maintained up to recognition
